PROFESSIONAL SUMMARY

Full-Stack Developer (MERN) who enjoys turning real operational problems into working software — from an AI-assisted requirement-writing tool to a CRM that unifies multi-branch business operations. Comfortable across the stack: Node.js/Express REST APIs secured with JSON Web Tokens (JWT), relational and NoSQL data design, and React.js interfaces. Seeking an entry-level Full Stack or Backend Developer role.

TECHNICAL SKILLS

Languages: JavaScript, Java, Python, SQL, HTML/CSS

Frameworks & Libraries: React.js, Redux, Node.js, Express.js, Bootstrap, Tailwind CSS

Databases: MongoDB, PostgreSQL, MySQL

Tools: Git, GitHub, Postman, Vercel, Salesforce CRM

Concepts: RESTful APIs, JSON Web Token (JWT) Authentication, Model-View-Controller (MVC) Architecture, OOP, Large Language Model (LLM) Integration

EXPERIENCE

Backend Developer Intern — Kosqu Technolab *May 2026 – Aug 2026 | Navi Mumbai*

- Built and shipped 14 RESTful API endpoints using Node.js/Express for core application modules, implementing JWT-based authentication to secure all protected routes.
- Optimized PostgreSQL schemas across 8 related entities through indexing and query restructuring, noticeably improving average query response time.
- Contributed to and extended a modular MVC backend architecture, adding reusable middleware for request validation and centralized authentication to reduce duplicate logic across modules.
- Partnered with 3 frontend developers to define API contracts and integration workflows, enabling parallel development and on-time delivery of key features.

Software Developer Intern — OptimumValue Solution *Sept 2025 – Feb 2026 | Navi Mumbai*

- Customized Salesforce CRM using Apex, Lightning Components, and validation rules, automating 7 core business workflows to reduce manual processing effort.
- Built a full-stack MERN platform that converts plain-language input into structured user stories via LLM integration, reducing the team's manual story-writing effort.
- Developed multiple Apex classes, triggers, and Flows to implement multi-step business-logic automation for client requirements.
- Queried CRM data via SOQL to build 6 dashboards and reports, giving stakeholders real-time visibility into sales pipeline, lead conversion, and case-status metrics.

PROJECTS

Business Management CRM | *React.js, Express.js, Node.js, PostgreSQL, LLM*

Live Demo | GitHub

Demo login: admin@antigravity.com / Admin@123

- Built a full-stack CRM supporting multi-branch business operations — lead tracking, invoicing, and quotation management — in a single platform.
- Implemented lead assignment and status-tracking workflows using React and a normalized PostgreSQL schema.
- Automated the quotation-to-invoice pipeline, reducing manual steps in the accounting workflow.

Spendly — Multi-User Expense Tracker | *React.js, Node.js, Express.js, MySQL, JWT*

Live Demo | GitHub

- Built a full-stack, multi-user expense tracker (React SPA + Express REST API) with account-scoped data isolation.
- Implemented secure JWT authentication with bcrypt-hashed passwords and express-validator input validation.
- Designed a normalized MySQL schema with promise-based connection pooling and environment-driven configuration.
- Built an analytics dashboard (Recharts) in a custom dark glassmorphism Tailwind CSS UI to visualize spending trends.

EDUCATION

Bharati Vidyapeeth College of Engineering, Navi Mumbai *2021 – 2025*

Bachelor of Engineering – Information Technology | CGPA: 7.8/10
